# HTML tips by Adriano Devon™

Every HTML doc has to start with <!doctype html>
To open is <head>
To close is </head> always use the / to close.

The setting and configuration of words sings etc it is required to use = <meta charset="utf-8"> this will allow the usage of many differents characters, like words, signs, etc.
At the end to close and works properly it is required the tag </body> and down below the  tag </html>
And always to close the tag / is required like these tags </title> </head> </body>
Following down it has to be added = <html lang="pt-BR">
To add aditional space the tag   is required.
The tag <title> will be always the one that will show up on the search bar.
Anything that is necessary to write without restrictions of characters the usage of the tag <p> is required to open and the tag </p> to close.
If it is necessary to add a comment, to open <!--   write here the comment --> to close and it will not show up on the browser but it will be on the code.
If it is necessary to add Euro on the code &euro; same thing with other currencies ex: Pound &pound; is required etc.
To change the style the page, it requires the tag <style>   {background: and here the code of the color for ex: red =  #F00; and then close with the tag  }
The standard font is Time News Roman, but if was necessary to change it, it requires to do the following below the background and still inside the brackets it is necessery to write front-family: Exemple: body { background: #F00; font-family:} and then it is necessary to type the name of the font ex: { background: #F00; font-family: Arial, sans serif:} and so on.
and if is necessary to change the color of the font, the following is required ex: { background: #F00; font-family: Arial, sans serif: color:#ccc }
To add a programming language to HTML for ex: Javascript = <script> open and then </script> close.
To atribute an action the following is required open <p that means Paragraph and between the body <body> </body> add <p id="nome"></p> and then write the word function between the programming language javascrip <script> </script> see the following exemple:      function escreverNome() {
          nome.innerHTML = "Adriano Devon";
      }
    window.onload=escreverNome;
When a more prominet text is required, the usage of the tag <h1> </h1> is required "always remember that the the tag / closes the code, and if it necessary to lower the font uses <h2> </h2> or <h3> </h3> and so on until <h6> </h6>
To group the head text, the tag <hgroup> </hgroup> is required.
To add Paragraph the tag <p> </p> is required.
To break the line the tag <br> is required.
 ex <p>
     Adriano Devon <br>
     Colorado-PR

Brazil`<br>`
Leo
`</p>`
And it will show up this way :
Adriano Devon
Colorado-PR Brazil
Leo
and not a straight line like this Adriano Devon Colorado-PR Brazil Leo.

Highlight a particular word like:  italic text, underlined text, etc.
Ex: `<b>` **Devon** `</b>` Bold
Ex: `<i>` *Devon* `</i>` Italic
Ex : `<u>` Devon `</u>` Underline
Ex : `<sub>` Devon `</sub>` Subscript
Ex: `<sup>` Devon `</sup>` Superscript
Ex : `<s>` Devon `</s>` Scratched

To add list without any order :
Ex: `<ul>`

`<li>`Brasil`</li>`
`<li>`Argentina`</li>`
`<li>`Uruguai`</li>`
`<li>`Venezuela`</li>`
`</ul>`

and the result will be like this:
- Brasil
- Argentina
- Uruguai
- Venezuela

and the list in order will be like this :

`<ol>`
`<li>`Alonso`</li>`
`<li>`Vettel`</li>`
`<li>`Massa`</li>`
`<li>`Button`</li>`
`</ol>`
Ex:
1. Alonso
2. Vettel
3. Massa
4. Button

And there is also the descriptve list `<dl>` `</dl>`   `<dt>` `</dt>`    `<dd>` `</dd>`

Ex: \<dl\>

                        \<dt\>Unity 01\</dt\>

      \<dd\>

            Course Instructions
         The best Software ever
      \</dd\>

      \<dt\>Unity 02\</dt\>
      \<dd\>

And it is also possible to drawn a square or a circle instead dots before the words (withoy any oder list).
Ex: \<ul type="square"\> or \<ul type="circle"\>

And it is also possible to add Roman numbers or letters insted of numbers (list in order).
Ex:  \<ol type="I"\>  = Roman Numbers
    \<ol type="A"\> = Alphabet

\<!-- List in order ---\>  and if it was added A instead of I the list will start with A and then B C D etc.
     \<ol type="I"\>
       \<li\>Alonso\</li\>
       \<li\>Vettel\</li\>
       \<li\>Massa\</li\>
       \<li\>Button\</li\>
     \</ol\>
Ex:
I.  Alonso
II.  Vettel
III. Massa
IV. Button

In different languages in a text the usage of the tag \<i\> \</i\> italic is required to differentiate the word or a phrase in a text, and also if it is necessary to express someone else's expression in a text.
Ex:
\<p\>There is a certain \<i\>je ne sais quoi\</i\> in the air.\</p\> and it will show up like this:There is a certain *je ne sais quoi* in the air.
And if it is necessary to emphasize a word or a phrase the tag \<em\> \</em\> is required
And if it is necessary to make the word or phrase strong or more visible, you need to add the tag \<strong\> \</strong\>
And if it is necessary to add a word or phrase with contrast the tag of \<b\> \</b\> **bold** can be used.

To add an image the tag \<img src="image.jpg"\> and remember that the image has to match with the same name and code like JPG PNG etc.
And it is also possible to change the size of the image using the following tags :
width="120"  and height="120" and it will be like this:
 \<img src="image.jpg" width="120" height="120"\>  and it is possible to change the

numbers to modify its size.

And to add a title in the image when the mouse is over it, the following is required:
title="my picture" and it has to be like this <img src="image.jpg" width="120" height="120" title="my picture">

And there's another attribute that is very important, if anyone can't see the image, the tag alt="my picture" will describe it, and it will be like this :
<img src="image.jpg" width="120" height="120" title="my picture" alt="my picture">

To add Border on the image the tag Border is required and also the pixels the number and then px and also to add a color on the border the tag solid # the number of the color, like this solid #000 and it is possible to change the position of the picture using the tag
style="float:left;margin-right add the position right, left. like in the following ex

<img src="devon.jpg" width="220" height="230" title="Devon" style="float:left;margin-right:30px;border:2px solid #000">

Numbers of Colors :
Black : #000
Red : #F00
Orange : #F74
Dark Blue : #005
Dark Gray : #555
Blue Light Gray : #678
Unfocused Red : #845
Baby Light Blue : #299
Bright Orange : #F62
Light Purple : #B38

To open the link that is on the page to another tab the tag target="bank" is required, following the ex:
<a href="https://www.youtube.com/watch?v=hzNDUulRbU4" target="bank"  >
Adriano Devon™ YouTube Channel Page </a>

To create a relative link the following is required, a relative link is a link insde the same page and it is possible to add a link to another page or a link to PDF, and the PDF and the html page has to be in the same folder
EX:
<section id="nav_interno">
<a href="dev300.pdf">The Ultimate Phrasal Verb Book</a> |
<a href="dev400.pdf">500 + Real English Phrases</a>
</section>
<h3 id="The Ultimate Phrasal Verb Book"> The Ultimate Phrasal Verb Book </h3>

and they will show up in blue color as a link like this:
The Ultimate Phrasal Verb Book | 500 + Real English Phrases

<p align="justify">    

<style> {background: #F74;}

<br clear="both">

<style> .clear-right;

margin-right
